

MEET AN AWS DELIVERY EXPERT: ISI IDEMUDIA VIDEO TRANSCRIPT

Hi! My name Isi Idemudia. I am an AWS solutions architect at Accenture AWS Business Group.

What is the latest project you've worked on at Accenture AWS Business Group?

The client approached us with a problem, they needed to migrate their applications from prem(ise) to AWS Cloud. And I was the lead container architect on this project. They were running containers and we needed to do that migration.

I migrated one application just as a proof of concept, from on prem(ise) to EKS and I was able to demonstrate how highly available the application were on EKS. The client was so, so impressed with the low cost and improved performance. Based on that, we got the additional approval to move an additional 1,000 applications from on prem(ise) to cloud.

What's unique about Accenture AWS Business Group?

Most of the clients want to go multi-cloud, they don't want one allegiance to one cloud provider. We're just like a one-stop-shop and the client doesn't have to go look for other consultants or resources to help them manage their other clouds.

What's the best lesson you learned at Accenture, and how did the experience change you?

The Women in Cloud Initiative is a program that aims to get more women into cloud technology within Accenture.

Just being part of that initiative and reaching out to girls and young women at colleges and high schools really made me see life in a different perspective.

What do you in your free time?

So, I have two lovely daughters, Ivana and Shelomi. And I've been able to teach them a lot of what I'm doing. Last year, they were in the science fair, we actually worked together to build an Alexa scale.

It just makes me really happy and so glad that Accenture is transferring skills to me and I'm able to transfer those skills to my daughters. It's like a generational blessing.
