

# HANNOVER MESSE RECAP

## VIDEO TRANSCRIPT

**Christina Raab:**

It is good to be back at Hannover Messe. Energizing a sustainable industry is the key theme of this year, and how technology and ecosystem partnership can help to accelerate.

**Goetz Erhardt:**

It's all about digital engineering and manufacturing and achieving our sustainability objectives, while designing and manufacturing better products faster in a more sustainable fashion.

**Thomas Rinn:**

It's absolutely amazing to see how the industry is developing, what we see from a technology perspective and what we also doing, we are really closely connected to our ecosystem partners here at the fair.

**Christophe Mouille:**

We need partner technology to be the catalyst and to accelerate the transformation of our clients.

**Brian May:**

My first time at Hannover as well and to say I'm impressed would be an understatement. It's quite a fair. So our industrials are facing a lot of challenges. Industrial manufacturers in general, digital and data and AI and GenAI are absolutely a response to those challenges that they're facing.

**Patrick Vollmer:**

Our work will significantly change the way we work, the kind of interfaces we create for our clients, and the kind of problems we can solve with AI.

**Jean Cabanes:**

If you want nothing to change, everything has to change.

**Christina Raab:**

There are a lot of opportunities. It is for us to grasp them and we have to act now.
